Maritime Education: Challenges and Course Corrections during the Pandemic By Dr.Malini Shankar, IAS (Retd.)- Vice Chancellor, Indian Maritime University; Ex Chairperson, NSB, EX DG

Dr.Malini Shankar, IAS (Retd.) - Vice Chancellor, Indian Maritime University; Ex Chairperson, NSB, EX DG

Counting the centuries which have gone by, no pandemic has had a kind of spread as the current Covid is having. All generations and all professions are affected and the maritime domain is no exception. Being a service segment, shipping and related activities are impacted more. Global economy cools, shipping gets the cold!

Economic disruptions apart, the education sector also has faced serious handicaps. While the campuses around the country closed and cleared the student populace, the challenges have multiplied. The latter half of 2020 lingers on and getting the students back could possibly be the last item to tick in the normalcy checklist.

Maritime training and education relies on a vocational model where practical exercises are the

preferred mode for preparing a student for the profession. The pandemic precludes the gathering of students and the hands-on training. This is an enigmatic challenge.

Maritime careers are entwined with competencies and so the professionals undergoing training at support, operational and management level competencies are affected by this disruption bump. The short duration training formats (read: Preparatory/Modular Courses) had come to a standstill. The challenge was to restart this engine. And there were efforts...

The efforts can be broadly seen as those taken up by the Administration, which were supportive and those by the Maritime Training Institutes (MTI) themselves, which could be termed self-sustaining and innovative. These, more importantly deserve introspection. In reality, when such efforts fan out, the crucial issue will not only be training but also the welfare of the students and the faculty. I share few of the efforts and approaches of IMU Campuses and the Affiliated MTIs with focus on the pre-sea training programmes. There could be valuable takeaways from these.

Dissemination of Training Modules

The initial steps were to maintain the continuum of the lesson deliveries. The training modules for classroom deliveries had to be 'zoomised' or 'googlised' for online mode. The storyboards which evolved (still evolving) will need to be objective-focussed and the time-consuming distractions which occur during direct contact classes were to be absent. The modules ready, the next step was to connect with the students on an everyday basis. The challenge here was the reach out to students at corners of the country and across the seas to the islands (many in the A&N, Lakshadweep Islands had poor connectivity). On the peninsula also, there were corona-cordoned pockets where communication by email or WhatsApp (WA) was difficult. Many MTIs proactively organised familiarisation workshops for Faculty and students at the start of the first lockdown phase. In some cases, the licensing issues added to the little hurdles. To add some

comfort, IMU decided to bear the mobile phone charges (to a limited extent) for the students of its Campuses.

The training delivery packages included power point presentations with limited slides to digest, short notes with explanations, solved problems with explanations, diagrams with explanations, lecture clips (short, up to 10 minutes) shared through available platforms (email; WA groups etc.). There were two or three questions at the end of each module for self-assessment. Skill videos were also prepared where required and shared.

It is pertinent to observe that while bulk of the communications were on WfH (Work from Home) mode, Campuses had also geared up with the IT Teams ready for contingencies. A very important part of the exercise was the pipeline for feedbacks. This would give inputs on the course corrections in core issues (e.g., doubts on content etc.) and support framework (e.g., Connectivity issues, large file downloads etc.). A significant variable to be measured from feed backs was the level of comprehension of the students. The effectiveness of the online mode of dissemination is a matter of concern for the pre-sea students since most of assessment elements could only be based on knowledge rather than application abilities.

A standard dissemination session lasted for 30-40 minutes and about 4 to 5 classes could be effectively scheduled in the working day period and about 5 days of the week were made good. With conventional tools such as white boards, slides, animation and videos from web, the target was to complete the academic syllabus. Managing the dissemination was another challenge which involved tracking of student attendees, time keeping etc. While the courses neared completion and assignments and MCQ tests followed, value added short courses were done by few MTIs. A number of webinars of marine interest were sighted while being circulated to students (Naval Architecture, Modular course examinations etc.).

To Be Continued In Next Publication issue on 3rd September, 2020.
